

Suzuki Diaries: Future Cities

1. What are two initiatives we saw in Montreal for food production and distribution?
2. What are three of the key advantages of local food production? Are there any disadvantages.
3. Why is *Waterfront Toronto* attempting to build green spaces in former industrial areas and urban spaces such as the underpass?
4. Underground tunnels are crucial for transportation. What is the alternate use that was discussed in the video? What are three advantages of this?
5. In Edmonton we saw a house build almost entirely from recycled materials. What are three advantages of this?
6. The Edmonton Waste Management Centre is a world leader in recycling and composting. What are some of the main initiatives they have taken? Why has their program been so successful?
7. *In the 20th century infrastructure and transportation systems were largely build around the personal vehicle.*
 - a. What problems does this pose for use today?
 - b. How does Vancouver's most recent transportation plan differ? What are the current priorities?
